

Abstract of the Disclosure

[0106] Apparatus and methods for use with a security system such as a benefit denial system may involve a containing element configured to receive an asset that may include a benefit for a user of the asset. The apparatus may include an electrical circuit operatively associated with the containing element and configured to communicate information to a receiver outside the containing element. The information may be configured to be used by the benefit denial system to provide the benefit to the user. Apparatus and methods for executing a conveyance of an interest in an asset from a first party to a second party may involve a containing element having an electrical circuit configured to communicate information corresponding to the asset to a receiver outside the containing element. An electrical circuit may be provided with means for destruction of the circuit by an asset user.
